SUMMARY

Industrial Engineering graduate (GPA 3.74) with experience in market research, operations and project coordination. Currently a Macro Analyst at PT Bali Sunset Capital, writing research for professional traders, while also helping run my family's shop. Previously supported aircraft assembly at PT Dirgantara Indonesia and taught CAD to more than 100 students. I build AI tools to speed up my work and check every number before it goes out. Open to full time, hybrid or remote roles.

SKILLS

Research and reporting: Market research, report writing, checking facts against primary sources, Microsoft Excel

Industrial engineering: Process improvement, production coordination, quality assurance support, inventory management, schedule tracking

AI: AI agents (Claude), prompt and context engineering, building tools with AI, workflow automation

Engineering design: SolidWorks, Autodesk Inventor, AutoCAD, technical drawing

Languages: Indonesian (native), English (spoken and written)

WORK EXPERIENCE

Macro Analyst (Contract, Remote) **Jul 2026 to Present**

PT Bali Sunset Capital, Remote

- Wrote 150+ research reports for professional traders in the first months, including 88 daily briefings and 71 daily email recaps, plus weekly positioning reports.
- Cover weekly CFTC futures positioning for FX majors, gold, crude oil and equity indices, and flag the biggest shifts each week.
- Wrote in depth reports on 6 central banks (Fed, ECB, BoE, BoC, RBA, RBNZ), each built around that bank's own policy framework.
- Check every number against the original source (central banks, statistics offices, exchanges) before release. Each correction becomes a written rule in a checklist.
- Set up AI agents with their own roles, shared memory files, rules and a fact log, so they pass work to each other and quality stays the same from one session to the next.

Operations Assistant **Oct 2024 to Present**

Family stationery and photocopy shop, Bandung Regency

- Run daily operations with my family: stock, customer service and sales at the counter.
- Order supplies and keep stock levels right for stationery and photocopy products.
- Keep the copiers and printers running and fix problems on the spot to limit downtime.
- Record cash flow and keep the basic books.

Staff Project Manager (Intern) **Jul 2024 to Sep 2024**

PT Dirgantara Indonesia (Persero), Bandung

- Supported the final assembly of the 6th NC212i aircraft at Indonesia's national aerospace company.
- Worked between 3 teams (engineering, production and quality assurance) to solve assembly issues and protect the schedule.
- Tracked production data in Excel, found where work was getting stuck, and reported progress to the Vice Project Manager.
- Took notes in meetings across teams and followed up on each action item with the team leads.

Laboratory Assistant **Aug 2022 to Oct 2024**

Engineering Drawing Laboratory, Telkom University, Bandung

- Wrote 16 CAD learning modules (SolidWorks, AutoCAD) used to teach more than 100 students.
- Trained and supervised new lab assistants so every class was taught to the same standard.
- Managed lab inventory and scheduled 20+ sessions a week for more than 200 users.

Apprentice **Feb 2022 to Jul 2022**

Vignette Research Group, Engineering Drawing Laboratory, Bandung

- Six months of intensive CAD training. Built 3D models, assemblies and technical drawings in Autodesk Inventor and SolidWorks.

PROJECTS

AI Job Screener | *Python, Streamlit, Groq, Claude, Apify* **2026**

- After graduating I needed a faster way through the job boards, so I built a tool with AI that collects LinkedIn and Jobstreet postings, scores each one from 0 to 100 against my profile and tracks every application. Built in about two weeks; it led to an interview.

Trading Dashboard | *Python, Flask, SQLite, JavaScript* **Mar 2026 to Present**

- A single web dashboard that replaces six separate websites for market monitoring: a screener with 11 strategies, an automatic trade journal and risk checks every 30 seconds. Second version, rebuilt under 6 written design rules based on lessons from the first. About 23,000 lines of code, written with AI under my specifications.

ECB Week Case Study | *Excel, public data* **Oct 2026**

- Followed one ECB decision week in 8 dated documents and tested 8 ECB meetings in Excel. Decision days moved EUR/USD no more than ordinary days.

Other tools built with AI | *HTML, JavaScript* **2026**

- Macro Master (macro learning workspace with 24 lessons), Ledgerline (personal finance app built around payday) and Flow Dashboard (daily planner with 35 automated checks). Each has a live demo on my portfolio.

Capstone Design: Electric Scooter V1 | *SolidWorks* **Oct 2024 to Dec 2024**

- Led a team of three to design and build a working electric scooter: 45 kph top speed, 21 km range, 48V 12.5Ah battery and a 500W BLDC motor. Managed fabrication with an outside workshop. Won Best Capstone Project.

EDUCATION

Bachelor of Engineering (S.T.), Industrial Engineering **Sep 2021 to Sep 2025**

Telkom University, Bandung

- GPA 3.74 out of 4.00. Top Module in most practicums.
- Relevant courses: Probability and Statistics, Operations Research, Production Systems and Automation, Information Systems and Database Design, Supply Chain Management, Facility Layout Planning.

TRAINING AND SELF STUDY

- Financial markets and macroeconomics, Jul 2025 to Present: self directed study of market structure, central bank policy and risk management, followed by a 6 month markets course.
- Applied AI and workflow automation, Jan 2026 to Present: daily use of AI agents for research, writing and building tools, with written specifications, rules and checks.
